

Your tech could be
slowing down your
business without
you even knowing.
Let's fix that.

Tech should **speed things up.**

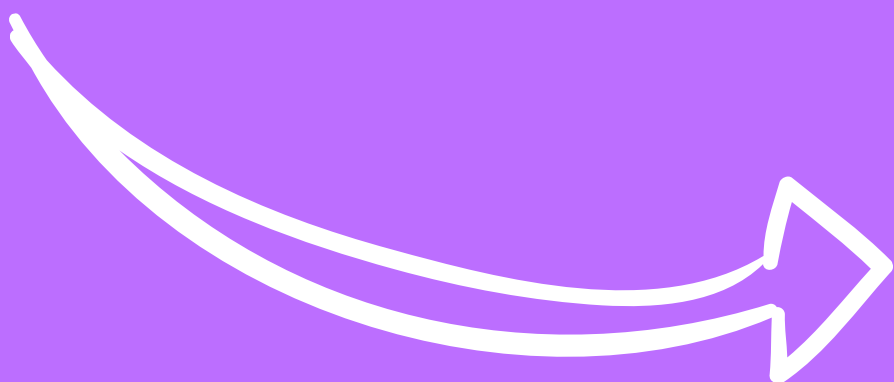

But for many businesses,
it's doing the opposite.

- ✕ **Wasting time...**
- ✕ **Frustrating staff...**
- ✕ **Missing opportunities.**

Here are **5 common tech problems** that could be holding back your business.

And how to
fix them...

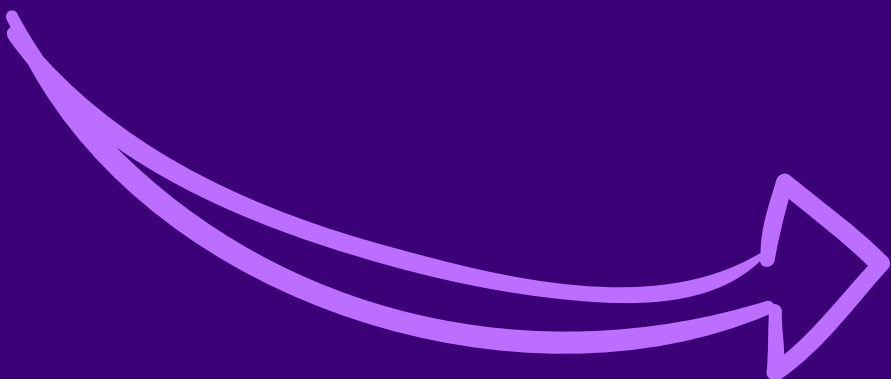

Problem 1:

**Your computers
are sloooooow.**

Fix:

**Replace devices every
3-5 years.**

If it's a memory issue, a
RAM upgrade could help.

Problem 2:

**You're using the wrong
(or too many) tools.**

Fix:

Audit what you're using.

Can you streamline it
with one platform (like
Microsoft 365)?

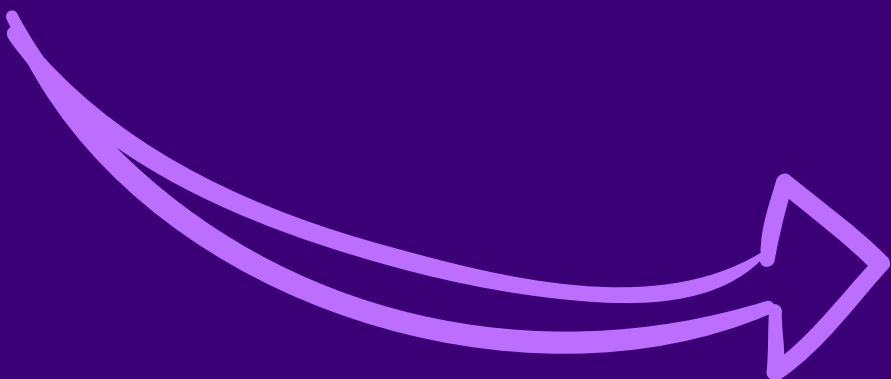

Problem 3:

**Poor security =
constant firefighting.**

Fix:

**Set up proper cyber
security tools.**

Multi-factor authentication
(MFA) and email protection
go a long way.

Problem 4:

No one knows how to use the tech.

Fix:

Training isn't a one-off.

Regular, bite-sized sessions = confident staff + better results.

Problem 5:

You wait for things to break before fixing them.

Fix:

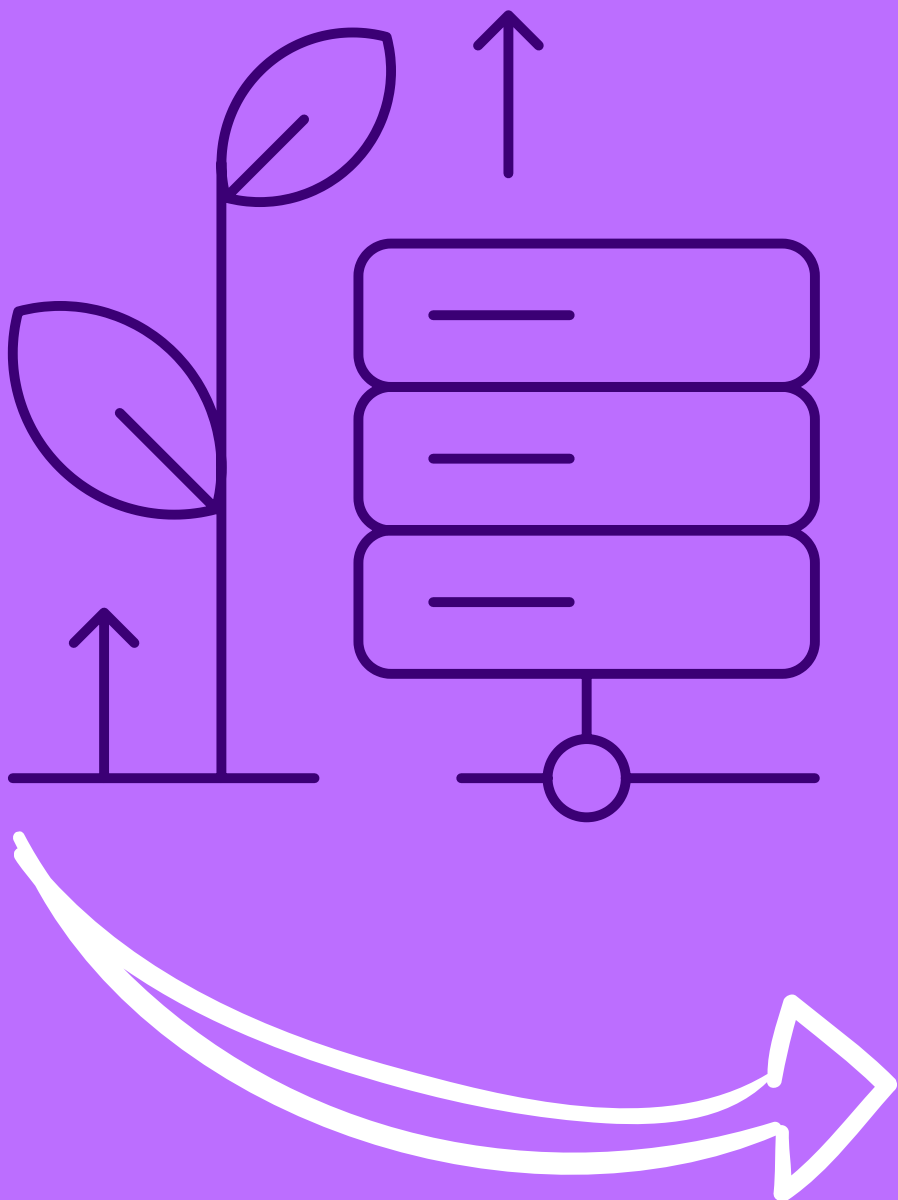

Choose a proactive IT support partner.

They can spot and remove problems before they slow you down.

Tech Should

**help you grow – never
hold you back.**

Small changes

**can lead to big
improvements in
speed, security and
productivity.**

Start

with this:

- ✓ **Review** your current tech setup
- ✓ **Identify** the biggest pain points
- ✓ **Ask:** Is there a faster, better, simpler way?

Want to stop tech
problems slowing
you down?

We can help.
